Software Engineer at Linx - OmniChannel  
São Paulo, São Paulo, Brasil

## Resumo

I am a big enthusiast of software engineering, free and open source software.

I have a great love for new technologies and tools that can make our lives easier, as developers or as people. I believe that programming has come to add and make our lives easier and optimize our time, increasing our quality of life.

Also, I'm a person who likes talking to crowds, unlike what comes to mind when we think of developers, I love being in meetings and having contact with other people.

I have experience in developing with NodeJS ( Express, Koa, Electron and AdonisJS ), PHP ( Laravel and Code Igniter ) and ReactJS, but I'm not attached to any technology, I'm in love with developing and solving problems in general.

---

## Experiência

Linx

Software Engineer

março de 2020 - Present (5 meses)

São Paulo, São Paulo

Atmo Digital

1 ano 8 meses

FullStack Developer II

julho de 2019 - março de 2020 (9 meses)

São Paulo e Região, Brasil

Development of features and preventive maintenance of the company's systems, working on the development of Digital Signage systems, the construction of a live streaming platform and the architecture of a management and segmentation system for online radio machines, the radio system was

integrated with an existing player built on .NET, which had already been deployed to more than 7000 machines. I participated in weekly meetings with the company's Staff to present the weekly results and goals for the next periods, in addition, I also had the opportunity to visit clients to present our systems and to train coworkers from distinct areas in the use of the systems that we've developed.

#### FullStack Developer I

abril de 2019 - junho de 2019 (3 meses)

#### Estagiário de Programação

agosto de 2018 - abril de 2019 (9 meses)

São Paulo e Região, Brasil

#### RYDS Tecnologia

##### FullStack Developer

março de 2017 - julho de 2018 (1 ano 5 meses)

São Paulo e Região, Brasil

Development of features and preventive maintenance of the client's systems, working with Node and PHP Rest APIs, Laravel MVC and Codelgniter
